SUBJECT INDEX

Acid dissociation processes
  Reactivity of galactose oxidase 771
Acidity
  Structural, acidity and chemical properties of some dihydrogen/hydride complexes of Group 8 metals with cyclopentadienyls and related ligands 83
η^3-Allenyl/propargyl complexes
  Addition reactions of mononuclear η^3-allenyl/propargyl transition metal complexes: a new class of potent organometallic carbon electrophiles 1143
Amide
  Nitrile hydratase and related non-heme iron sulfur complexes 577
Amino acids
  Arene-selective peptide and protein derivatization 1125
Antibiotics
  Metallo-β-lactamases: does it take two to tango? 519
Antiferromagnetism
  A novel superconductor with insulating magnetic ground state 921
Antimalarial drugs
  The role of haem in the activity of chloroquine and related antimalarial drugs 493
Antitumor drugs
  Kinetic aspects of interactions between DNA and platinum complexes 61
Antitumour
  Studies on the interaction of histidyl containing peptides with palladium(II) and platinum(II) complex ions 171
Applications: magnetic devices
  Molecules to build solids: high T_C molecule-based magnets by design and recent revival of cyano complexes chemistry 1023
Aqueous organometallic chemistry
  Arene-selective peptide and protein derivatization 1125
Arene complexes
  Arene-selective peptide and protein derivatization 1125
Aromatic electrophilic substitution
  Addition reactions of mononuclear η^3-allenyl/propargyl transition metal complexes: a new class of potent organometallic carbon electrophiles 1143
Assembly/disassembly
  Protein-bound iron–sulfur centers. Form, function, and assembly 1049

Benzoheterocycles
  Electron deficient bonding of benzoheterocycles to triosmium clusters: synthesis and applications to organic chemistry 975
Bimetallic catalytic systems
  Perspectives of rhodium organometallic catalysis. Fundamental and applied aspects of hydroformylation 883
Bimetallic complexes
  Mono- and dinuclear sesquifulvalene complexes, organometallic materials with large nonlinear optical properties 1217
Binding constants
  The interaction of ferrocenoyl peptides with 3-aminopyrazole 185
Binuclear metal complex
  Valence transition with charge ordering in a conductive MMX-chain complex 1169
Biomimetic chemistry
  A bioinspired approach to control over size, shape and function of polynuclear iron compounds 1067
Bioorganometallic chemistry
  Arene-selective peptide and protein derivatization 1125
Biphase product separation
  Chemistry in fluorous media: a user's guide to practical considerations in the application of fluorous catalysts and reagents 587
Bistability
  Cooperative phenomena and light-induced bistability in iron(II) spin-crossover compounds 471
Bridging ligand
  Molecular architecture in the field of photonic devices 155

Cancer diagnosis
  Basic aqueous chemistry of $[M(OH_2)_3(CO)_3]^+$ (M = Re, Tc) directed towards radiopharmaceutical application 901

PII: S0010-8545(99)00214-3

Carbanions
Electron deficient bonding of benzoheterocycles to triosmium clusters: synthesis and applications to organic chemistry 975
Carbon dioxide
Carbon dioxide interaction with metal atoms: matrix isolation spectroscopic study and DFT calculations 557
Catalysts
Chemistry in fluorous media: a user's guide to practical considerations in the application of fluorous catalysts and reagents 587
From clusters to nanoparticles and catalysis 1269
Cation radicals
Novel routes for the modification of iron porphyrins 109
Chalcogenidometalates
Low temperature route towards new materials: solvothermal synthesis of metal chalcogenides in ethylenediamine 707
Charge density wave
Electronic structures of quasi-one-dimensional halogen-bridged Ni^{III} complexes with strong electron-correlations 309
Charge ordering
Valence transition with charge ordering in a conductive MMX-chain complex 1169
Charge transfer
Supramolecular architectures in low dimensional TCNQ compounds containing nickel and copper polyamine fragments 447
Chemical evolution
The possible role of Cu(II) for the origin of life 1085
Chemical phase separation
The labile magnetic structure of JT copper and nickel complexes in the layered oxides 1255
CHIRAGEN-type ligands
Stereoselective synthesis of coordination compounds 811
Chirality
Stereoselective synthesis of coordination compounds 811
Chiral metal complexes
Chiral metal complexes as probes in electron-transfer reactions involving metalloproteins 357
Clusters
Electron deficient bonding of benzoheterocycles to triosmium clusters: synthesis and applications to organic chemistry 975
Cluster stability
Protein-bound iron–sulfur centers. Form, function, and assembly 1049
Cobalt corrins
The structure of cobalt corrinoids based on molecular mechanics and NOE-restrained molecular mechanics and dynamics simulations 127
Composite materials
Organic/inorganic composite materials: the roles of organoamine ligands in the design of inorganic solids 737
Contrast agents
Metallofullerene drug design 199
CooA
Structure and function of CooA, a novel transcriptional regulator containing a b-type heme as a CO sensor 267
Cooperative effects
Cooperative phenomena and light-induced bistability in iron(II) spin-crossover compounds 471
Coordination chemistry
X-ray absorption spectroscopy in coordination chemistry 1101
Coordination complexes
Carbon dioxide interaction with metal atoms: matrix isolation spectroscopic study and DFT calculations 557
Copper
Dioxygen activation by copper sites: relative stability and reactivity of (μ-η^2:η^2-peroxo)- and bis(μ-oxo)dicopper cores 855
Copper oxides
The labile magnetic structure of JT copper and nickel complexes in the layered oxides 1255
Copper proteins
Structure–function relationships of copper-containing nitrite reductases 245
Correlation
Correlations of the distribution of spin states in spin crossover compounds 629
CO sensor
Structure and function of CooA, a novel transcriptional regulator containing a b-type heme as a CO sensor 267
Crystal engineering
Multifunctional coordination compounds: design and properties 841

Cyclopentadienyl ligands
Arene-selective peptide and protein derivatization 1125
Cytochrome *c*
New approach to the construction of an artificial hemoprotein complex 961

Dendrimer
Chemistry in the internal voids of dendrimers 3
Denitrification
Structure–function relationships of copper-containing nitrite reductases 245
DFT calculations
Carbon dioxide interaction with metal atoms: matrix isolation spectroscopic study and DFT calculations 557
Dihydrogen
Structural, acidity and chemical properties of some dihydrogen/hydride complexes of Group 8 metals with cyclopentadienyls and related ligands 83
Dinuclear complexes
Molecular architecture in the field of photonic devices 155
Dioxygen
Dioxygen activation by copper sites: relative stability and reactivity of (μ-η^2:η^2-peroxo)- and bis(μ-oxo)dicopper cores 855
Dioxygen adducts
Advancement in stereochemical aspects of Schiff base metal complexes 537
Distance restraints
The structure of cobalt corrinoids based on molecular mechanics and NOE-restrained molecular mechanics and dynamics simulations 127
DNA
Kinetic aspects of interactions between DNA and platinum complexes 61
DNA binding protein
Structure and function of CooA, a novel transcriptional regulator containing a b-type heme as a CO sensor 267
Drugs
Lanthanides—the future drugs? 297
Dugong
Iron biominerals in medicine and the environment 1199

Electrochemistry
Mono- and dinuclear sesquifulvalene complexes, organometallic materials with large nonlinear optical properties 1217
Electrochromism
Optical and electrical properties of vanadium oxides synthesized from alkoxides 391
Electronic structure
The 3Fe containing ferredoxin from *Desulfovibrio gigas*: an NMR characterization of the oxidised and intermediate states 871
Electron nuclear double resonance
Studies of hyperfine interactions in [2Fe–2S] proteins by EPR and double resonance spectroscopy 1003
Electron paramagnetic resonance
Studies of hyperfine interactions in [2Fe–2S] proteins by EPR and double resonance spectroscopy 1003
Electron transfer
Chiral metal complexes as probes in electron-transfer reactions involving metalloproteins 357
Molecular architecture in the field of photonic devices 155
New approach to the construction of an artificial hemoprotein complex 961
Photoinduced processes in multicomponent arrays containing transition metal complexes 671
Endohedral metallofullerenes
Metallofullerene drug design 199
Energy transfer
Molecular architecture in the field of photonic devices 155
Photoinduced processes in multicomponent arrays containing transition metal complexes 671
EPR
High-frequency EPR of transition ion complexes and metalloproteins 209
ESR
High-frequency EPR of transition ion complexes and metalloproteins 209
Ethylenediamine
Low temperature route towards new materials: solvothermal synthesis of metal chalcogenides in ethylenediamine 707

Ferredoxin
Studies of hyperfine interactions in [2Fe–2S] proteins by EPR and double resonance spectroscopy 1003
The 3Fe containing ferredoxin from *Desulfovibrio gigas*: an NMR characterization of the oxidised and intermediate states 871

Ferrihydrite
Iron biominerals in medicine and the environment 1199
Ferriprotoporphyrin IX
The role of haem in the activity of chloroquine and related antimalarial drugs 493
Ferrocene
The interaction of ferrocenoyl peptides with 3-aminopyrazole 185
[3Fe–4S]
The 3Fe containing ferredoxin from *Desulfovibrio gigas*: an NMR characterization of the oxidised and intermediate states 871
Fe–S cluster biochemistry
Protein-bound iron–sulfur centers. Form, function, and assembly 1049
Fluorescence
Molecular events switched by transition metals 649
Fluorescence spectroscopy
Porphyrin assemblies as chemical sensors 683
Fluorous media
Chemistry in fluorous media: a user's guide to practical considerations in the application of fluorous catalysts and reagents 587
FTIR spectroscopy
Carbon dioxide interaction with metal atoms: matrix isolation spectroscopic study and DFT calculations 557
Fullerene biodistribution
Metallofullerene drug design 199

Galactose oxidase
Reactivity of galactose oxidase 771
Goethite
Iron biominerals in medicine and the environment 1199
Gold
Chemistry in the internal voids of dendrimers 3

Haemozoin
The role of haem in the activity of chloroquine and related antimalarial drugs 493
Heme protein
Structure and function of CooA, a novel transcriptional regulator containing a b-type heme as a CO sensor 267
Hemilabile ligands
Arene-selective peptide and protein derivatization 1125
High field
High-frequency EPR of transition ion complexes and metalloproteins 209
High frequency
High-frequency EPR of transition ion complexes and metalloproteins 209
High spin
High-frequency EPR of transition ion complexes and metalloproteins 209
High-spin → low-spin relaxation
Cooperative phenomena and light-induced bistability in iron(II) spin-crossover compounds 471
Histidyl peptides
Studies on the interaction of histidyl containing peptides with palladium(II) and platinum(II) complex ions 171
^{1}H-NMR
The 3Fe containing ferredoxin from *Desulfovibrio gigas*: an NMR characterization of the oxidised and intermediate states 871
Hole centers
The labile magnetic structure of JT copper and nickel complexes in the layered oxides 1255
Hydride
Structural, acidity and chemical properties of some dihydrogen/hydride complexes of Group 8 metals with cyclopentadienyls and related ligands 83
Hydroformylation
Perspectives of rhodium organometallic catalysis. Fundamental and applied aspects of hydroformylation 883
Hydrogen bonding
The interaction of ferrocenoyl peptides with 3-aminopyrazole 185
Hydrosilylation
Pt-catalyzed hydrosilylation of ethylene. A theoretical study of the reaction mechanism 933

Imine
Nitrile hydratase and related non-heme iron sulfur complexes 577
Inhibitor binding
Structural properties of the nickel ions in urease: novel insights into the catalytic and inhibition mechanisms 331

Inter-facial catalysis
Inter-facial catalysis using various water-compatible ligands in supramolecular systems 1185
Intermetallic interactions
Coordination complexes in two dimensional magnets and superconductors 827
Internal layers
Chemistry in the internal voids of dendrimers 3
Ion translocation
Molecular events switched by transition metals 649
Iridium
Photoinduced processes in multicomponent arrays containing transition metal complexes 671
Iron
Structural, acidity and chemical properties of some dihydrogen/hydride complexes of Group 8 metals with cyclopentadienyls and related ligands 83
Iron compounds
A bioinspired approach to control over size, shape and function of polynuclear iron compounds 1067
Iron(II) coordination compounds
Cooperative phenomena and light-induced bistability in iron(II) spin-crossover compounds 471
Iron porphyrins
Novel routes for the modification of iron porphyrins 109
Iron–sulfur centers
Protein-bound iron–sulfur centers. Form, function, and assembly 1049
Iron sulfur complex
Nitrile hydratase and related non-heme iron sulfur complexes 577
Iron sulfur complexes
On the function of nitrogenase FeMo cofactors and competitive catalysts: chemical principles, structural blue-prints, and the relevance of iron sulfur complexes for N_2 fixation 607
Iron–sulfur protein
Studies of hyperfine interactions in [2Fe–2S] proteins by EPR and double resonance spectroscopy 1003
Isokinetic relationship
Isokinetic and isoequilibrium relationships in spin–crossover systems 405
Jahn–Teller dynamics
The labile magnetic structure of JT copper and nickel complexes in the layered oxides 1255
Kinetics
Kinetic aspects of interactions between DNA and platinum complexes 61
Kinetic studies
Interaction of nitrogen bases with some platinum(II) and palladium(II) complexes—usual and unusual features 19
Labile magnetic structure
The labile magnetic structure of JT copper and nickel complexes in the layered oxides 1255
Langmuir–Blodgett
A photomagnetic effect for controlling spin states of Iron(II) complexes in molecular materials 47
Lanthanides
Lanthanides—the future drugs? 297
Light-induced spin change
A photomagnetic effect for controlling spin states of Iron(II) complexes in molecular materials 47
Line or free energy relationships (LFER)
Isokinetic and isoequilibrium relationships in spin–crossover systems 405
Liquid crystals
Optical and electrical properties of vanadium oxides synthesized from alkoxides 391
Long-range electron transfer
Structure–function relationships of copper-containing nitrite reductases 245
Macrocycle
Dinuclear metal complexes of bis-macrocycles 371
Magnetic JT polarons
The labile magnetic structure of JT copper and nickel complexes in the layered oxides 1255
Magnetic materials
A bioinspired approach to control over size, shape and function of polynuclear iron compounds 1067
Malaria
The role of haem in the activity of chloroquine and related antimalarial drugs 493

Materials: Prussian blues, high spin molecules
Molecules to build solids: high T_C molecule-based magnets by design and recent revival of cyano complexes chemistry 1023
Matrix isolation
Carbon dioxide interaction with metal atoms: matrix isolation spectroscopic study and DFT calculations 557
Mesoporosity
Rapid derivatization of mesoporous thin-film materials based on Re(I) zinc-porphyrin 'molecular squares': selective modification of mesopore size and shape by binding of aromatic nitrogen donor ligands 29
Metal chalcogenides
Low temperature route towards new materials: solvothermal synthesis of metal chalcogenides in ethylenediamine 707
Metal halides
Organic/inorganic composite materials: the roles of organoamine ligands in the design of inorganic solids 737
Metallacycles
Rapid derivatization of mesoporous thin-film materials based on Re(I) zinc-porphyrin 'molecular squares': selective modification of mesopore size and shape by binding of aromatic nitrogen donor ligands 29
Metallofullerols
Metallofullerene drug design 199
Metallo-β-lactamases
Metallo-β-lactamases: does it take two to tango? 519
Metallomacrocycles
Supramolecular architectures in low dimensional TCNQ compounds containing nickel and copper polyamine fragments 447
Metalloprotein
High-frequency EPR of transition ion complexes and metalloproteins 209
Metalloproteins
Chiral metal complexes as probes in electron-transfer reactions involving metalloproteins 357
Metal oxides
Organic/inorganic composite materials: the roles of organoamine ligands in the design of inorganic solids 737
Methyl viologen
New approach to the construction of an artificial hemoprotein complex 961
Mixed valence
Valence transition with charge ordering in a conductive MMX-chain complex 1169
Molecular conductor
Valence transition with charge ordering in a conductive MMX-chain complex 1169
Molecular devices
Molecular architecture in the field of photonic devices 155
Molecular dynamics
The structure of cobalt corrinoids based on molecular mechanics and NOE-restrained molecular mechanics and dynamics simulations 127
Molecular machines
Molecular events switched by transition metals 649
Molecular magnetism
Multifunctional coordination compounds: design and properties 841
Molecular materials
Triazolephthalocyanines: synthesis, supramolecular organization and physical properties 231
Molecular mechanics
The structure of cobalt corrinoids based on molecular mechanics and NOE-restrained molecular mechanics and dynamics simulations 127
Molecular modelling
The structure of cobalt corrinoids based on molecular mechanics and NOE-restrained molecular mechanics and dynamics simulations 127
Molecular motions
Molecular events switched by transition metals 649
Molecular recognition
New approach to the construction of an artificial hemoprotein complex 961
Porphyrin assemblies as chemical sensors 683
Molecular switches
Molecular events switched by transition metals 649
Molecules
A photomagnetic effect for controlling spin states of Iron(II) complexes in molecular materials 47
Monovalent cations
Solution thermodynamics of pyridinocalix(4)arenes and monovalent cations 283

Mössbauer spectroscopy
Iron biominerals in medicine and the environment 1199
Mott transition
Valence transition with charge ordering in a conductive MMX-chain complex 1169
Mussel
Iron biominerals in medicine and the environment 1199
MX-chain
Valence transition with charge ordering in a conductive MMX-chain complex 1169
MX-chains
Electronic structures of quasi-one-dimensional halogen-bridged Ni^{III} complexes with strong electron-correlations 309

Nanoparticles
From clusters to nanoparticles and catalysis 1269
Nanostructues
Rapid derivatization of mesoporous thin-film materials based on Re(I) zinc-porphyrin 'molecular squares': selective modification of mesopore size and shape by binding of aromatic nitrogen donor ligands 29
Nitrile hydratase
Nitrile hydratase and related non-heme iron sulfur complexes 577
Nitrite reductase
Structure–function relationships of copper-containing nitrite reductases 245
Nitrogen base interaction
Interaction of nitrogen bases with some platinum(II) and palladium(II) complexes—usual and unusual features 19
Nitrogen fixation
On the function of nitrogenase FeMo cofactors and competitive catalysts: chemical principles, structural blue-prints, and the relevance of iron sulfur complexes for N_2 fixation 607
NLO materials
Mono- and dinuclear sesquifulvalene complexes, organometallic materials with large nonlinear optical properties 1217
NMR
Novel routes for the modification of iron porphyrins 109
NO
Nitrile hydratase and related non-heme iron sulfur complexes 577
Non-linear regression
The interaction of ferrocenoyl peptides with 3-aminopyrazole 185
Nuclear medicine
Metallofullerene drug design 199
Nucleophilic addition
Addition reactions of mononuclear η^3-allenyl/propargyl transition metal complexes: a new class of potent organometallic carbon electrophiles 1143
Electron deficient bonding of benzoheterocycles to triosmium clusters: synthesis and applications to organic chemistry 975

Oligopeptides
Studies on the interaction of histidyl containing peptides with palladium(II) and platinum(II) complex ions 171
One-phase chemistry
Chemistry in fluorous media: a user's guide to practical considerations in the application of fluorous catalysts and reagents 587
Optical information storage
A photomagnetic effect for controlling spin states of Iron(II) complexes in molecular materials 47
Organic superconductor
Trifluoromethylmetallate anions as components of molecular charge transfer salts and superconductors 781
Organic superconductors
A novel superconductor with insulating magnetic ground state 921
Organic templates
Organic/inorganic composite materials: the roles of organoamine ligands in the design of inorganic solids 737
Origin of life
The possible role of Cu(II) for the origin of life 1085
Osmium
Electron deficient bonding of benzoheterocycles to triosmium clusters: synthesis and applications to organic chemistry 975
Structural, acidity and chemical properties of some dihydrogen/hydride complexes of Group 8 metals with cyclopentadienyls and related ligands 83

Palladium complexes
Studies on the interaction of histidyl containing peptides with palladium(II) and platinum(II) complex ions 171

Paramagnetic system
The 3Fe containing ferredoxin from *Desulfovibrio gigas*: an NMR characterization of the oxidised and intermediate states 871
Peierls-Hubbard model
Electronic structures of quasi-one-dimensional halogen-bridged Ni^{III} complexes with strong electron-correlations 309
Peptide
The interaction of ferrocenoyl peptides with 3-aminopyrazole 185
Peptides
Arene-selective peptide and protein derivatization 1125
Peroxidase activity
New approach to the construction of an artificial hemoprotein complex 961
Pharmacological actions
Lanthanides—the future drugs? 297
Phase transition
Correlations of the distribution of spin states in spin crossover compounds 629
Phenomena: molecular magnetism, photomagnetism
Molecules to build solids: high T_C molecule-based magnets by design and recent revival of cyano complexes chemistry 1023
Phosphorus
Chemistry in the internal voids of dendrimers 3
Phosphorus modifying ligands
Perspectives of rhodium organometallic catalysis. Fundamental and applied aspects of hydroformylation 883
Photoisomerization
A photomagnetic effect for controlling spin states of Iron(II) complexes in molecular materials 47
Photonic devices
Molecular architecture in the field of photonic devices 155
Photonic switch
Molecular architecture in the field of photonic devices 155
Phthalocyanine-analogues
Triazolephthalocyanines: synthesis, supramolecular organization and physical properties 231
Platinum complexes
Kinetic aspects of interactions between DNA and platinum complexes 61
Studies on the interaction of histidyl containing peptides with palladium(II) and platinum(II) complex ions 171
Platinum(II) and palladium(II) complexes
Interaction of nitrogen bases with some platinum(II) and palladium(II) complexes—usual and unusual features 19
Polyamine complexes
Supramolecular architectures in low dimensional TCNQ compounds containing nickel and copper polyamine fragments 447
Polynuclear
A bioinspired approach to control over size, shape and function of polynuclear iron compounds 1067
Porphyrins
Photoinduced processes in multicomponent arrays containing transition metal complexes 671
Porphyrin assemblies as chemical sensors 683
Proteins
Arene-selective peptide and protein derivatization 1125
Pulse radiolysis
Reactivity of galactose oxidase 771
Pyrazole group
Dinuclear metal complexes of bis-macrocycles 371
Pyridinocalix(4)arenes
Solution thermodynamics of pyridinocalix(4)arenes and monovalent cations 283

Quinolines
Electron deficient bonding of benzoheterocycles to triosmium clusters: synthesis and applications to organic chemistry 975

Radiopharmacy
Basic aqueous chemistry of $[M(OH_2)_3(CO)_3]^+$ (M = Re, Tc) directed towards radiopharmaceutical application 901
Reaction mechanism
Pt-catalyzed hydrosilylation of ethylene. A theoretical study of the reaction mechanism 933
Reconstituted myoglobin
New approach to the construction of an artificial hemoprotein complex 961

Resonance light scattering
Porphyrin assemblies as chemical sensors 683
Reversible cathode
Optical and electrical properties of vanadium oxides synthesized from alkoxides 391
Rhodium catalysts
Perspectives of rhodium organometallic catalysis. Fundamental and applied aspects of hydroformylation 883
Role of Cu(II)
The possible role of Cu(II) for the origin of life 1085
Ruthenium
Arene-selective peptide and protein derivatization 1125
Photoinduced processes in multicomponent arrays containing transition metal complexes 671
Structural, acidity and chemical properties of some dihydrogen/hydride complexes of Group 8 metals with cyclopentadienyls and related ligands 83

Salt-induced peptide formation (SIPF)
The possible role of Cu(II) for the origin of life 1085
Sandwich complexes
Mono- and dinuclear sesquifulvalene complexes, organometallic materials with large nonlinear optical properties 1217
scFv
Basic aqueous chemistry of $[M(OH_2)_3(CO)_3]^+$ (M = Re, Tc) directed towards radiopharmaceutical application 901
Schiff bases
Advancement in stereochemical aspects of Schiff base metal complexes 537
Sensors
Porphyrin assemblies as chemical sensors 683
Sesquifulvalenes
Mono- and dinuclear sesquifulvalene complexes, organometallic materials with large nonlinear optical properties 1217
β-Sheet
The interaction of ferrocenoyl peptides with 3-aminopyrazole 185
Site-directed mutagenesis
Structural properties of the nickel ions in urease: novel insights into the catalytic and inhibition mechanisms 331
Site selection
Chiral metal complexes as probes in electron-transfer reactions involving metalloproteins 357
Solid dinuclear compounds
Dinuclear metal complexes of bis-macrocycles 371
Solution structure
The 3Fe containing ferredoxin from *Desulfovibrio gigas*: an NMR characterization of the oxidised and intermediate states 871
Solution thermodynamics
Solution thermodynamics of pyridinocalix(4)arenes and monovalent cations 283
Solvatochromism
Mono- and dinuclear sesquifulvalene complexes, organometallic materials with large nonlinear optical properties 1217
Solvothermal synthesis
Low temperature route towards new materials: solvothermal synthesis of metal chalcogenides in ethylenediamine 707
Spin-crossover
A photomagnetic effect for controlling spin states of Iron(II) complexes in molecular materials 47
Cooperative phenomena and light-induced bistability in iron(II) spin-crossover compounds 471
Spin crossover
Correlations of the distribution of spin states in spin crossover compounds 629
Spin–crossover systems
Isokinetic and isoequilibrium relationships in spin–crossover systems 405
Spin density wave
Electronic structures of quasi-one-dimensional halogen-bridged Ni^{III} complexes with strong electron-correlations 309
Spin-state changes
Isokinetic and isoequilibrium relationships in spin–crossover systems 405
Stereoselective synthesis
Stereoselective synthesis of coordination compounds 811
Stereoselectivity
Chiral metal complexes as probes in electron-transfer reactions involving metalloproteins 357
Steric requirements of Schiff base ligands
Advancement in stereochemical aspects of Schiff base metal complexes 537

Structural environment
X-ray absorption spectroscopy in coordination chemistry 1101
Structure–function
On the function of nitrogenase FeMo cofactors and competitive catalysts: chemical principles, structural blue-prints, and the relevance of iron sulfur complexes for N_2 fixation 607
Substitution with NCS^-
Reactivity of galactose oxidase 771
Superconducting phase transition
A novel superconductor with insulating magnetic ground state 921
Superconductor-insulator transition
A novel superconductor with insulating magnetic ground state 921
Superconductor-metal transition
A novel superconductor with insulating magnetic ground state 921
Superconductors
Coordination complexes in two dimensional magnets and superconductors 827
Supramolecular chemistry
Porphyrin assemblies as chemical sensors 683
Rapid derivatization of mesoporous thin-film materials based on Re(I) zinc-porphyrin 'molecular squares': selective modification of mesopore size and shape by binding of aromatic nitrogen donor ligands 29
Supramolecular compounds
Multifunctional coordination compounds: design and properties 841
Supramolecular organization
Triazolephthalocyanines: synthesis, supramolecular organization and physical properties 231
Supramolecular systems
Inter-facial catalysis using various water-compatible ligands in supramolecular systems 1185
Synthesis
Triazolephthalocyanines: synthesis, supramolecular organization and physical properties 231
Synthetic models
Dioxygen activation by copper sites: relative stability and reactivity of (μ-η^2:η^2-peroxo)- and bis(μ-oxo)dicopper cores 855

Tc–carbonyls
Basic aqueous chemistry of $[M(OH_2)_3(CO)_3]^+$ (M = Re, Tc) directed towards radiopharmaceutical application 901
TCNQ
Supramolecular architectures in low dimensional TCNQ compounds containing nickel and copper polyamine fragments 447
Tc–peptide complexes
Basic aqueous chemistry of $[M(OH_2)_3(CO)_3]^+$ (M = Re, Tc) directed towards radiopharmaceutical application 901
2,2′:6′,2″-Terpyridine complexes
Photoinduced processes in multicomponent arrays containing transition metal complexes 671
Tetrakis(trifluoromethyl)metallate anions
Trifluoromethylmetallate anions as components of molecular charge transfer salts and superconductors 781
Thalassemia
Iron biominerals in medicine and the environment 1199
Theoretical methods: orbital model of exchange interaction
Molecules to build solids: high T_C molecule-based magnets by design and recent revival of cyano complexes chemistry 1023
Theoretical study
Pt-catalyzed hydrosilylation of ethylene. A theoretical study of the reaction mechanism 933
Thermochromism
Optical and electrical properties of vanadium oxides synthesized from alkoxides 391
Transcriptional regulator
Structure and function of CooA, a novel transcriptional regulator containing a b-type heme as a CO sensor 267
Transition metal atoms
Carbon dioxide interaction with metal atoms: matrix isolation spectroscopic study and DFT calculations 557
Transition metal clusters
From clusters to nanoparticles and catalysis 1269
Triazolephthalocyanines
Triazolephthalocyanines: synthesis, supramolecular organization and physical properties 231

Tribenzhexaazaporphyrins
Triazolephthalocyanines: synthesis, supramolecular organization and physical properties 231
Trigonal-prismatic configuration
Advancement in stereochemical aspects of Schiff base metal complexes 537
Two dimensional magnets
Coordination complexes in two dimensional magnets and superconductors 827
Type 1 Cu
Structure–function relationships of copper-containing nitrite reductases 245
Type 2 Cu
Structure–function relationships of copper-containing nitrite reductases 245
Tyrosinase
Dioxygen activation by copper sites: relative stability and reactivity of (μ-η^2:η^2-peroxo)- and bis(μ-oxo)dicopper cores 855

Urease spectroscopy
Structural properties of the nickel ions in urease: novel insights into the catalytic and inhibition mechanisms 331

Vanadium oxides
Optical and electrical properties of vanadium oxides synthesized from alkoxides 391
Vitamin B_{12}
The structure of cobalt corrinoids based on molecular mechanics and NOE-restrained molecular mechanics and dynamics simulations 127

Water soluble catalysts
Perspectives of rhodium organometallic catalysis. Fundamental and applied aspects of hydroformylation 883
Water-soluble complexes
Inter-facial catalysis using various water-compatible ligands in supramolecular systems 1185

X-ray absorption spectroscopy
X-ray absorption spectroscopy in coordination chemistry 1101
X-ray crystal structure
Structure–function relationships of copper-containing nitrite reductases 245

Zinc
Metallo-β-lactamases: does it take two to tango? 519
Zirconium
Chemistry in the internal voids of dendrimers 3
